Date: December 18, 2007

Dear Mr. Bassett:

I would like to commend you on the development of the micro-blaster. The micro-blaster has become one of the most valuable tools in the Lewisburg public works department arsenal. The two noticeable advantages of having the micro-blaster is the time and money saved.

The time that water service crews save by having this device on the truck is tremendous. It has taken the time of pounding and scratching rock with a back-hoe almost out of the picture. This has saved crews time and prevented wear and tear on the equipment. Also in a lot of cases it has prevented us from having to rent expensive hoe-rams and rock removal equipment.

I will be looking forward to any new developments you may have in the coming years.

Thank you,

Mark Carver
Director of Public Works.
